PEDESTRIANISATION AND SOCIABILITY
LAS CABEZAS DE SAN JUAN | SEVILLE
SARA TAVARES COSTA, ARCHITECT
OCTOBER 2013

The objective is to improve the quality of the space by linking and reclaiming the public area, creating continuity within and outside the square, offering greater freedom of movement. Pavement areas are reduced, thereby creating pedestrian-friendly spaces.

The project aims to unify several existing pedestrian routes by connecting the new pedestrian routes to the surrounding areas, the integration of the existing public spaces, such as the Paseo de la Princesa and the Plaza de la Real, which are located on the edges of the area.

A system of circular walkways, made of concrete pavers, is proposed to create a new pedestrian network, allowing for the connection of various points within the area. This system allows for the expansion of a network of pedestrian routes.

The proposed trees along with the existing trees and the pergolas within the park will improve the aesthetic quality of the area. These trees will be added to the existing trees, creating a more natural and open environment.

In the future, the square can be used for various events and activities. The square will be integrated with the surrounding areas, creating a sense of community and identity.

The square will also serve as a focal point for the surrounding areas, allowing for the integration of public spaces and creating a more cohesive urban fabric.
