# K050 VIENNA VALLEY TERRACE

Architects Tillner & Willinger ZT GmbH

The Vienna Valley Terrace is one of the new design measures developed in the Vienna Valley Urban Development Plan that addresses the urgent localized need to provide more public open space for the 5th and 6th Viennese districts. Bridging over the entrenched U4 subway line, the terrace expands the existing public space directly to the edge of the Vienna River. The pedestrian and cycling routes along the south bank of the Vienna River are reconceived as a welcoming, linear public space with recreational and social qualities. The design elements and materiality, i.e. abundant planters, natural vegetation and integrated wooden seating, invite public use while also fostering a positive connection with nature and water recreation. Overall, the project creates an attractive atmosphere for urban activity and is a success with the people using it at all times of the day.

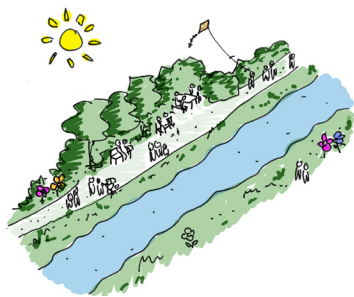

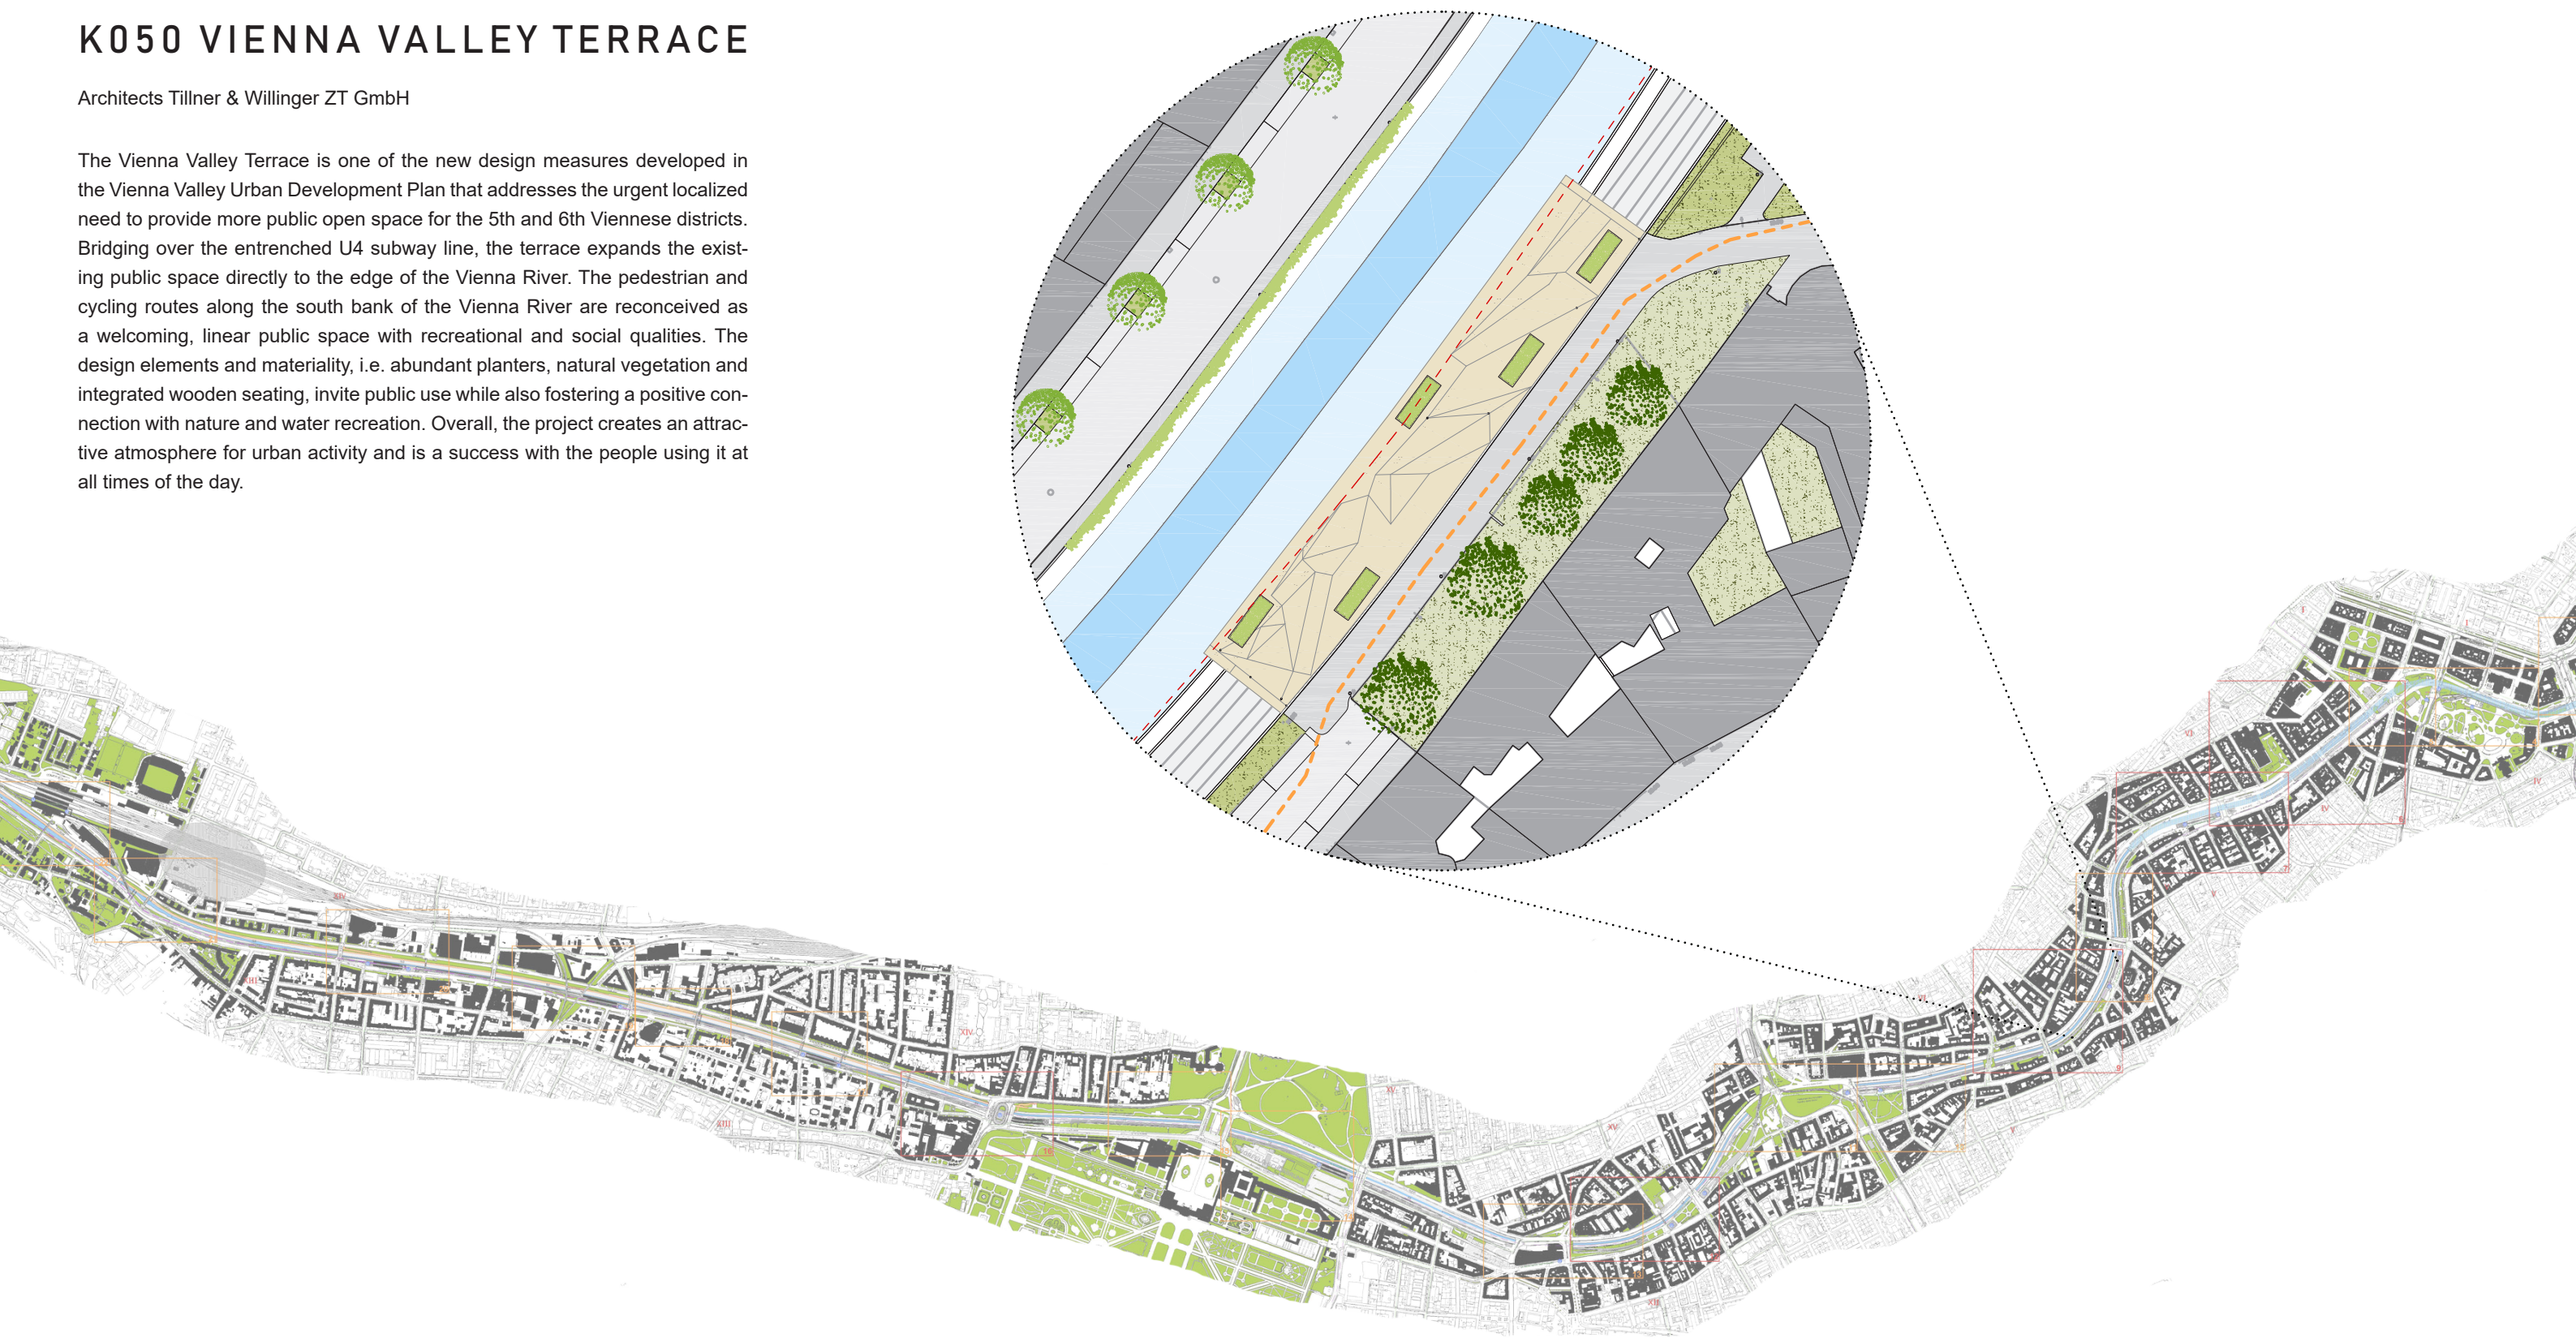

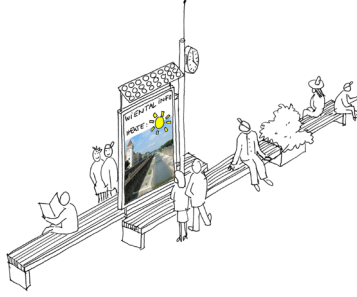

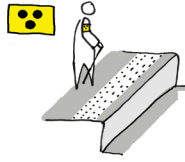

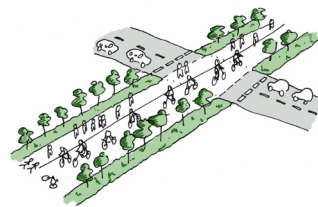

develop and enhance green space
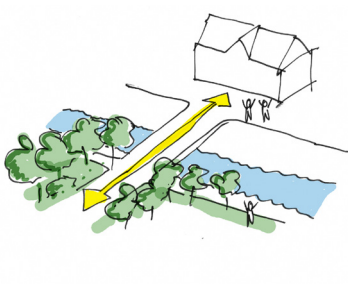

create coherence between neighboring districts
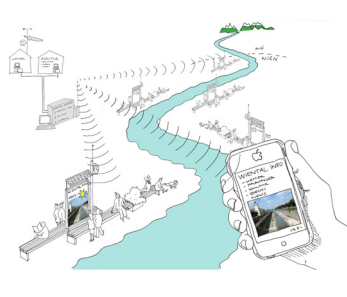

create infopoints with free wifi

upgrade pedestrian and bicycle network

improve disabled access and saftey

encourage activity during all periods of the day
