

01. CHIADO PUBLIC SPACE . CARMO CONNECTION

Lisbon . Portugal . 2016

1. Aerial view of the existent. It shows the earlier intervention of Chiado reconstruction after the fire of 1988. The new intervention intends to complete the connection of Patio B with the ruins of the Church of Carmo, the Carmo Square and the Santa Justa Lift.

2. Carmo Square Convent entrance shows a change in the original street level and now the access is made by stairs. On lateral side, a gate to close the connection with the Santa Justa Lift and ground level of the church ruins.

3. The existent state of the public space does not allow the permanency of public on the ground and the connection to Santa Justa Lift is done by a metallic bridge.

4. This view from the bridge shows the non-existent connection to Patio B.

5. One of the most disturbing facts of the existent is the ground level of the Church. There is a complete miss caring of the area and the metallic bridge is a visual barrier that does not benefit the space of the ruins.

6. Over the years some buildings were built to fulfill the needs of the GNR Military Quarters. Today they no longer have this need so it is proposed to demolish some constructions and recover others.

7. View from Santa Justa Lift over the existent buildings and future Carmo Terrace.
