Piazzetta at Emauzy Abbey

The Piazzetta is enclosed by two churches and the administration wing at the Emauzy Abbey. Harmonisation of the place surrounded by the St. Cosmas and St. Damian Church, Church of the Virgin Mary and the Dermatological Institute's wing has been accomplished as a modern geometrized structure composed of traditional materials. We used Hlinsko granite and steel bands for diagonal gridding. Filling of the squares (old Vienna fathom side length) is formed by blasted concrete from river stones. The whole area is purified from artificially created traffic barriers separating the road and pavements including streetlamps. Entrance for vehicles driving into the area is regulated only by telescopic pillars with a communication system.
