Bostancı Footbridge & Sunset Lounge

Bostancı Footbridge & Sunset Lounge have been designed by Stadio Eren Buyuğ, Architects as part of the Kıyı Ajansı’s current project for Istanbul’s coastal rejuvenation project. These two architectural interventions that are positioned in close proximity and in harmony with each other, have generated a new integrative coastal all for Istanbul, where Bostancı Creek forms a new cityscape for the city’s residents and visitors alike.

The footbridge is a significant feature of the project, connecting Kıyı Ajansı’s current park with the city’s existing infrastructure. Its design is inspired by traditional Ottoman architecture, with its use of wood and stone materials, and it provides a smooth transition from the city to the river, allowing pedestrians and cyclists to enjoy the scenic views of the river and the surrounding landscape.

In alignment with the master plan vision of Kıyı Ajansı’s concept, Bostancı Footbridge was designed to serve as the heart of Bostancı Creek and to play a central role in the rejuvenation of the area. It features a series of pedestrian and cycling paths that are designed to connect with the surrounding areas, creating a seamless network of pedestrian and cycling pathways that encourage people to explore the area and to enjoy the natural beauty of the river and the surrounding landscape.

The Sunset Lounge is a new urban intervention that has been designed to function as a floating observatory, providing visitors with stunning views of the river and the surrounding landscape. It is a multi-functional space that can be used for a variety of activities, including classes, workshops, and other educational programs.

These two projects, along with the other interventions that are being planned as part of the Kıyı Ajansı’s project, are expected to transform the area into a vibrant and dynamic urban space that will serve as a focal point for the city’s residents and visitors alike.
