

mobilit

study on the urban future of Torrelles, which provides for the totality of the main street with a "reversed priority", that is to say pedestrian priority above the traffic of rolled traffic. This characterization supposes, besides the corresponding restrictive signaling, the definition of a unique platform and an improvement of the environmental comfort.

Original state views

This image shows a street scene from a first-person perspective. A dark-colored car is parked on the right side of the road. The road has a white dashed line running along its edge. In the background, there are several multi-story residential buildings. Some cars are parked along the curb in front of the buildings. The sky is overcast.
