

REHABILITATION OF PLAZA DE LA LEÑA

Reorganization of Plaza de la Leña, has gone an evidence treatment to the surroundings. It has left a sad and weak space to become a playground full of life and light, inhabited by all and for all.

The greater opening and improvement of the accessibility conditions by introducing lower slope routes that cross the square, and the incorporation of playgrounds with a wider range of age have been very well received by the neighbours. The use of space has increased, favouring occupation with necessary activities for the neighbours, optimizing its use and eliminating hidden and useless areas, with greater capacity for degradation and occupation by undesirable activities.

In this way, the space has been revalued and profitable, and not only in the lands that affect the square but also in the surroundings due to a improve of living conditions of the neighbours and of urban quality, achieving a more attractive space for everyone.
