

In total more than 5,000 indigenous trees have been planted, reinforcing the three typologies. The necessary water reservoirs have been redesigned as part of the lakes and ponds where migrating geese breed.

The network of water channels has been improved by a large number of eco-ducts, culminating in a below-level water landscape, with cars circling on an elevated roundabout.

The infrastructure has become an integral part of the polder landscape, where the difference between the natural and the artificial has disappeared to make place for a hybrid functional landscape.
