

EXPERIMENTAL ARCHITECTURE WORKS (K322)

Curators: M. Ebru Erdönmez Dinçer, Alişan Çırakoğlu

Experimental Architectural Works is an essential extension of the International Architectural Biennial Antalya which is organised by The Chamber of Architects of Turkey, Antalya Branch, as the first architectural biennial of Turkey since 2011. Its agenda is to showcase experimental works by architects on city and urban space issues within the city itself and allow for the public to interact with these works.

Architectural practice gets influenced by is essentially representative of changes in public rituals, changes in culture, production and consumption patterns within the society. The way which architecture manifests itself, is shared and consumed within public space is important in terms of the cultural sphere of architecture as well as the power of this sphere to affect and transform architecture itself.

Experimental Architecture includes works that focus on research as much as design and application by developing conceptual projects that either make use of traditional methods of production or object to such methods by using innovative tools and means of production. Its main goal is to discover unique approaches to this field and to develop innovative design tools and methods, and the results which appear as a result of their implementation. As a result, the process and the outcome holds surprises and unexpected experiences for both the architect and the users.
