**REDEVELOPMENT OF THE GREEN AXIS**
CARPENTRAS / FRANCE

////////////////////////////////

**DESCRIPTIVE ACCOUNT OF WORK**
Our project aims at restoring the continuity of this landscape unity along the river banks, and to offers the use and enjoyment of this vast natural space to poeple of Carpentras.
This redevelopment values the city and its heritage and allows the walkers to discover the quality of the site. It provides convenient and pleasant connections between the northern districts and the historic center fully accessible (pedestrians, bicycles, disabled, cars..) and a public itinerary along the banks of the Auzon, in a large linear park.
At the foot of the Orange Gate and the high esplanade, the big trellis is a major element in the green axis implementation. It creates a links between the city and the river.
The esplanade offers the most beautiful panoramas over the plains of the Mont Ventoux.
The current uneven ground is important, the purpose of our project is to manage differences in levels to facilitate the access for all. The old car park platform land levelling, using landfill, permits to keep 135 lots protected by a trellis at the foot of the wall, restoring a vegetal consistency, and to guarantee the continuity of the pedestrian walkway in the axis, while easily serving all levels.

**DEVELOPERS**
City of Carpentras

**AUTHORS**
Atelier d'Architecture Emmanuel Nebout,
Alep paysage,
8'18'',
André Verdier,
Sogreah,
Adret

**TOTAL COST**
13,000,000 € TTC

**TOTAL SURFACE AREA**
11 ha

**YEAR IN WHICH WORK WAS FINALISED**
2014
