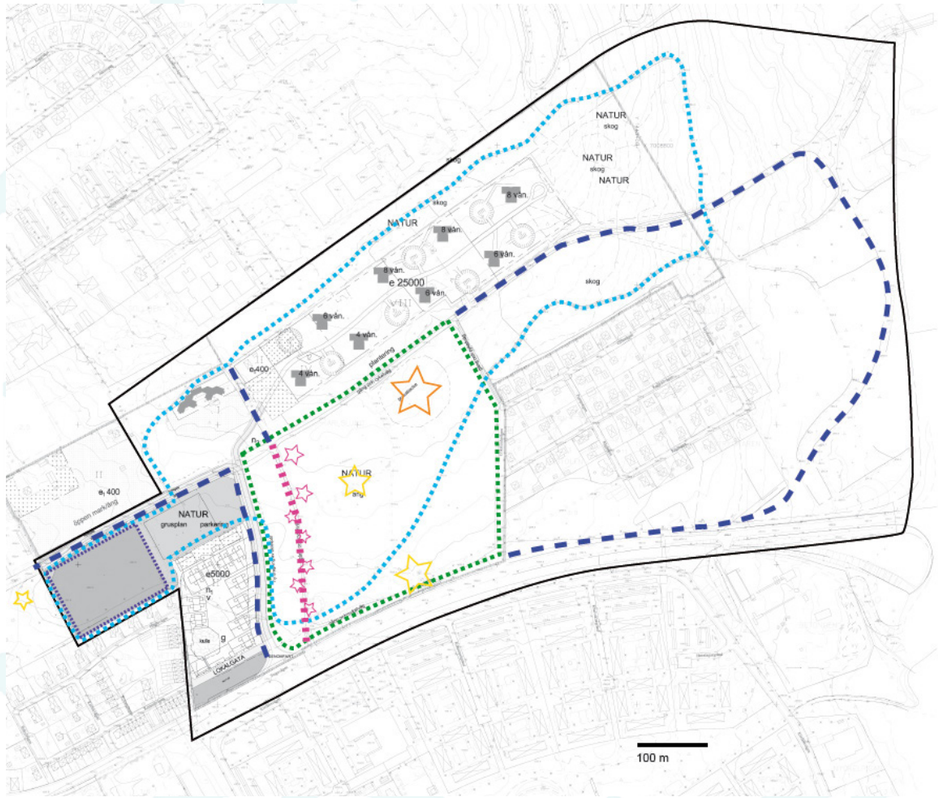
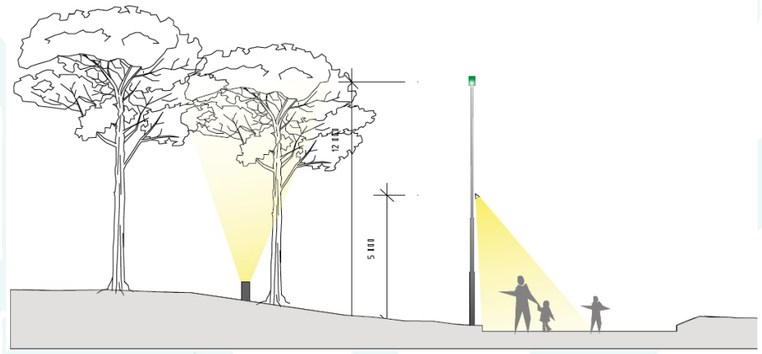
# Concept





## Our aim was to create improved quality of life for the people who live in and visit Remonthagen

*"Breaking down a greater space to a more defined and human scaled space through illumination"*

The following elements were defined when working with the light project:

- profile Remonthagen by strengthening its identity with lighting
- create lighting for recreation since Remonthagen is used for walking the dog, skiing, take walks, relaxing and sledding
- create a secure and safe passage between residential areas
- create guidelines for lighting of the planned housing areas around Remonthagen to ensure proper light environment and attractive outdoor environments for the residents

*"Active lifestyle 24 hours per day all year around"*
