

SITUATION

The coloured zones indicate the whole area of the urban environment that has been improved: the existing asphalt alleys network have been refurbished, new sidewalks, lightning, signs, ramps, art installation have been created and exhibited in the neighborhood and a new public parking has been designed close to the metro station. The size of the Muzeiko's plot is only 4650sq.m but the area transformed by the investment affects the entire neighborhood- more than 120 000sq.m. The second phase of the refurbishment is expanding to the next -door abandoned building.
