ASSESSMENT OF WORKS

These works organise the public space of a section of seafront promenade where there is a large diversity of elements. The fact of unifying the city planning criteria and widening the section to be able to develop the uses traditional of a seafront promenade, lets us provide a correct use to the public space.

This action, along with incorporating a wider area around the Guaita Tower, lets the connection between Barques Beach and the Montgat town centre be strengthened, as well as the connection to the sections of the promenade executed earlier. These types of works are necessary to obtain high quality spaces for leisure on the seafront.

CONDITION BEFORE AND AFTER WORKS FROM MONTGAT HILL
