

SITE PRIOR TO AND AFTER THE INTERVENTION

In 2012, the Barcelona Metropolitan Area and the City Council began the rehabilitation of these interiors, launching a series of partial projects that enable and allow the space to be understood as a whole, improving the accessibility and solving the endemic problem of the slightest rain flooding the four portals, consequently involving the electric metres room.

The visual comfort, safety perception, environmental quality, maintenance costs, lighting, landscaping and street furniture replacement are also intended to be improved.

The residents demanded a place to sit and play with the children, easily monitored visually, with non-slip and rough materials in order to do not end becoming a paradise for skaters and so on, but with facilities permitting wheelchairs' use.
