

## THE ST ANDREW HOLBORN GARDEN

Improvement works to St. Andrew's Holborn Gardens delivered step-free access to the main entrance of the Church and the north garden from St. Andrews Street. Security railings were installed to address the issue of anti-social behaviour and railings have also replaced a dividing wall between the two gardens to create a visual connection between the spaces. Improvements to the north garden include a welcoming space with areas for seating and improved passive surveillance, encouraging users to visit the previously isolated garden. Promotion of biodiversity has been achieved by providing more greenery and planting, and removing physical constraints to enhance the garden's accessibility for disabled users.
