RIQUALIFICAZIONE di PIAZZA JORGE CHÁVEZ detto GEO DOMODOSSOLA - 2010 / 2014

Evaluation:

Today the square is mainly connected to the urban pattern, and finally opened to the vision of the magnificent scenery of the Alps. Sustainable materials were used for its construction: stone partially recycled, and partially from local quarries; placed dy, stabilized soil, steel and wood treated with oil finishing, mixture of local essences for turf, trees and hedges planted with care respecting the living space, a low-power LED light, tiles for recycling. It requires less labor for maintenance, is except for the regular areas of the green areas.

It has accessibility for disabled people making it a place where it is pleasant to stay.

The celebrative monument of the 20th century has been restored and valued, the new sculptural work dialogues with it and renews in a contemporary way the celebrative nature of the heroic era.

The work has been welcomed by the citizens and the new controversy has stopped. Only some people complain about the fact that the new trees grow too slowly.

The nearby kindergarten has adopted the square and has travelled through the route that includes the other 13 works as far as Brig in Switzerland. An educational opportunity: the discovery of the territory and the landscape through the interpretation that architecture and art have been able to give along the route.

This project of Jorge Chavez new icons, drew with a sign of Futura Ballis his media and facilities flight...
