

HANNAH-ARENDT-PARK VIENNA

A NEW PARK FOR THE SEESTADT ASPERN DISTRICT

DESCRIPTION OF INTERVENTION

The „Hannah-Arendt-Park“ in the midst of the new city district is a place of diversity and possibilities. The multifunctionality and openness of the design facilitates long-term interactions with the residents as well as the working population of Seestadt Aspern. The basic structure of the “Hannah-Arendt-Park” consists of two rings enveloping the recreational areas. The outer ring functions as an urban interface connecting the park with the surrounding urban space. Its concrete water channel

collects the rainwater and leads it into the flowering rainwater garden. The inner ring with its red running track (inspired by the main urban structure of the districts ring street) provides at the same time a unique identity of the park. A green, scenic centre with rolling hills, recreation areas top the design off. The highlight of the “Hannah-Arendt-Park” is its manifold playground. Its design and theme is a tribute to the former airfield. One of

the essential characteristics of this city park is its continuum of time and space. Various types of usage be it sports, reading a book in the grass or meeting colleagues during lunch break parallel, only separated aerial or time wise. This encourages togetherness between generations and their different interests of recreation.
